The instrument

An additive ambient synthesizer: every voice is twenty thousand sine waves, computed on the graphics card. Each harmonic of a note is not one sine but a cloud of slightly detuned ones, every partial with its own slow drift, its own shimmer and its own place in the stereo field.

It plays by itself or under your hands. The conductor (Autoplay) is Noctuary's: a chord in just intonation that changes one voice at a time, minutes apart, in the spirit of Robert Rich's sleep concerts. Press Play in the header (or Space in the standalone) to start or stop it; play the keyboard over it, or switch it off and play alone.

The picture under the header shows the partials themselves, as the graphics card has them this moment: every eighth partial of every voice a point, its frequency across, its loudness up, leaving a trail that fades -- so you see each harmonic's cloud, and every partial rising, falling and wandering as the motions, the field and the landscapes move it. Green for what you play, violet for the conductor, pale blue for the second conductor, pale grey for the ghosts of the memory. On the right, the landscape the Aurora motion reads, with a line where the voices are in its loop.

The cloud

Spectrum shapes the harmonics: Tilt makes the upper ones fall away, Brightness closes a window over them, Odd / Even thins one kind, Inharmonic stretches them as a stiff string does. The voice keeps its level whatever the shape: these colour the sound, they do not make it louder.

Cloud sets how wide each harmonic's cloud is (in cents, and how it widens towards the top), how far every partial drifts in pitch and how far its level shimmers, and how far the partials scatter across the stereo field. Purity (Tuning) narrows the clouds too, so that just intervals can lock.

Air adds a band of noise made of partials around a multiple of the fundamental: Centre, Width and Flicker (how fast its partials quiver -- which is what makes them heard as noise).

CLOUD

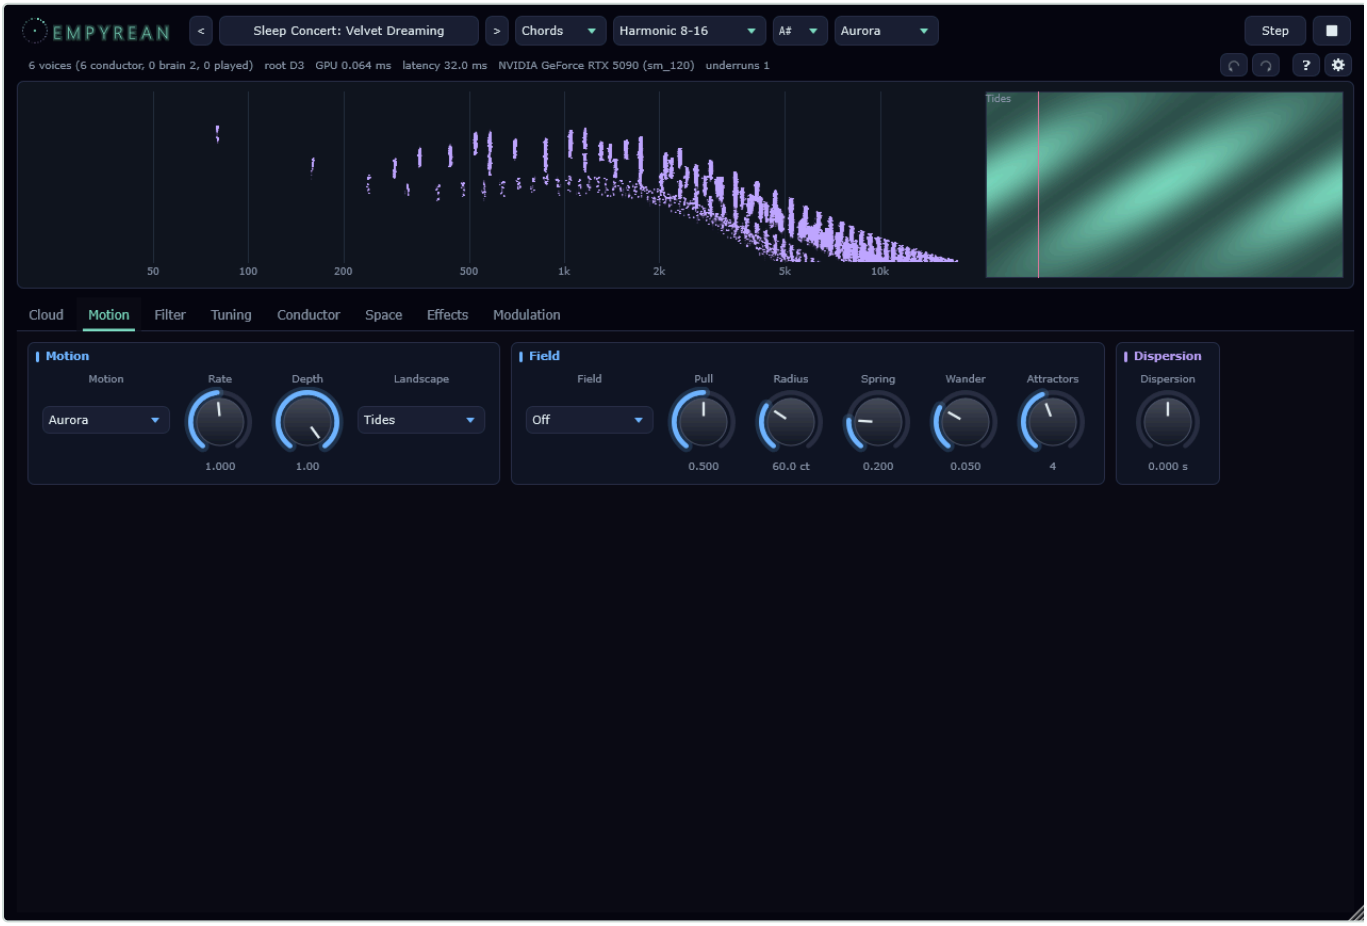

Control	Key	Range	Default
Partials	`partials`	200 .. 20000	20000
Spectral Tilt	`tilt`	0.3 .. 3	1.2
Brightness	`brightness`	0 .. 1	1
Odd / Even	`odd_even`	-1 .. 1	0
Inharmonic	`inharmonic`	0 .. 1	0
Width	`cloud_width`	0 .. 100 ct	25 ct
Width Slope	`width_slope`	0 .. 1	0.3
Drift	`drift`	0 .. 30 ct	3 ct

Drift Rate	`drift_rate`	0.01 .. 2 Hz	0.1 Hz
Shimmer	`shimmer`	0 .. 1	0.4
Shimmer Rate	`shimmer_rate`	0.01 .. 2 Hz	0.15 Hz
Stereo	`stereo`	0 .. 1	1

AIR

Control	Key	Range	Default
Air	`air`	0 .. 1	0
Centre	`air_center`	1 .. 12 x	3 x
Width	`air_width`	50 .. 2400 ct	600 ct
Flicker	`air_jitter`	0.5 .. 40 Hz	8 Hz

Motion and landscapes

Every partial has envelopes of its own, on three lanes: loudness, pitch and place. A motion sets them all at once: Random (every partial for itself, a fine glitter), Wave (a wave climbing through the spectrum), Pendulum (each harmonic pulses a little faster than the one below, over a bass that stays), Breathe (loudness, place and pitch travel through each cloud), Glissando (every partial glides into its note from up to fifteen semitones away), Aurora (the partials read a landscape).

A landscape is time against frequency: every partial reads the column at its own frequency. Aurora, Shepard (bands climbing for ever), Tides, Rain (short glints) and Choir (the formants of u-o-a-e-i, the vowel turning slowly). Rate and Depth scale whatever the motion does; Depth 0 leaves the bare cloud.

The field moves the partials as a whole, on top of any motion. Scale pulls every partial towards the nearest pitch of the scale: a wide or stretched cloud gathers into the key and keeps only a narrow shimmer. Swarm lets a few attractors (Attractors) wander through the spectrum on chaotic paths (Wander is how fast) and gathers the partials within their reach (Radius); Scatter pushes the partials away from them instead, gaps moving through the sound like dust parted by a wind. Pull is how fast the partials may move, Spring how strongly they are drawn back to their own places. The partials keep their own phases while they gather, so the level stays.

Dispersion makes each partial's clock late by its pitch. Positive, the low ones run up to that many seconds late: an attack or a glint falls from the top as a cascade, like a drop on ice. Negative, the high ones are late and it rises. On a held sound it is heard where the sound changes: attacks, releases, the glints of the landscapes.

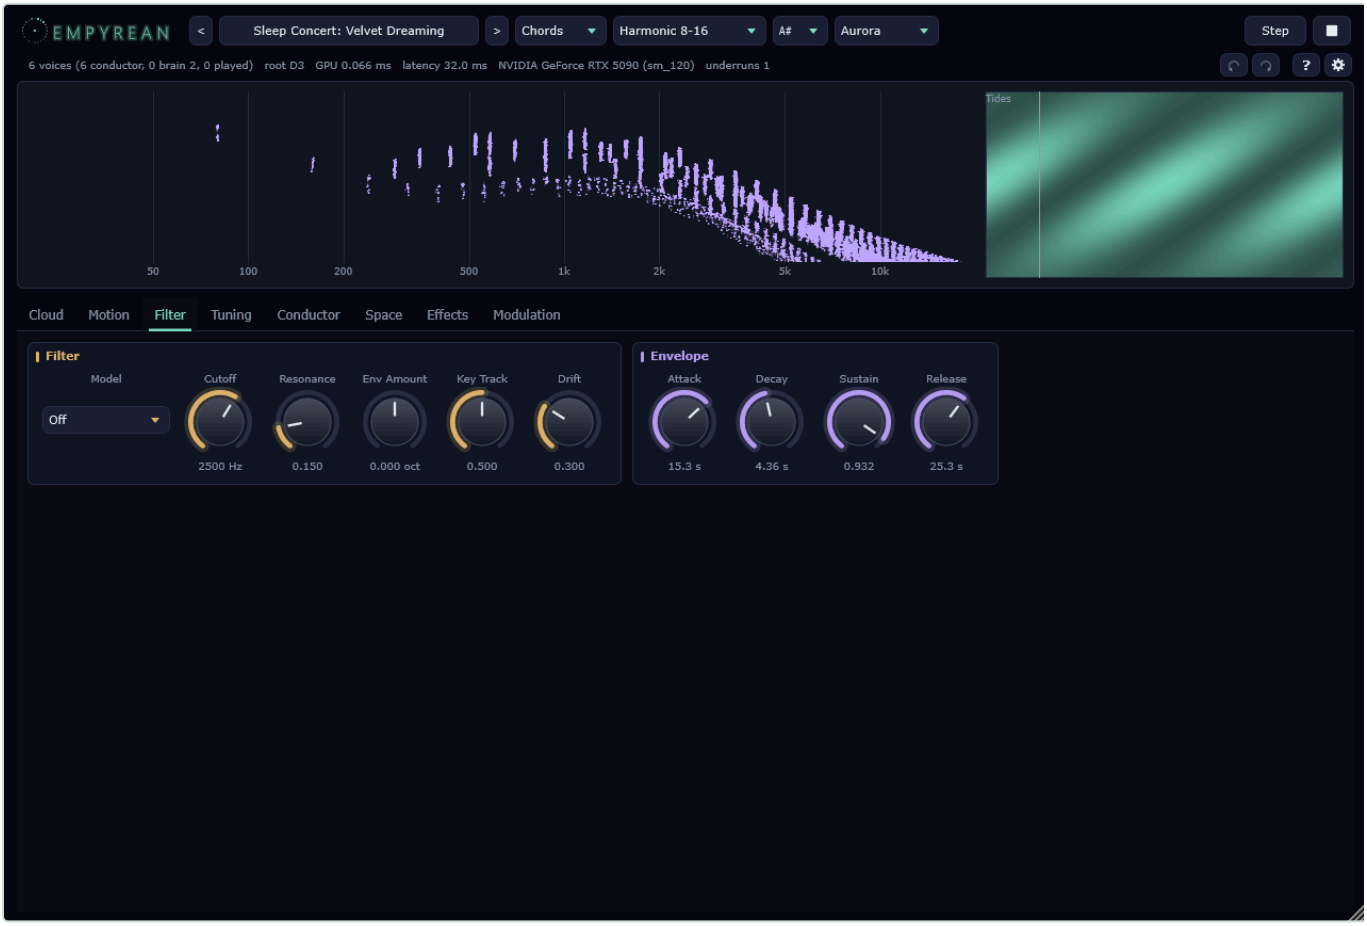

MOTION

Control	Key	Range	Default
Motion	`motion`	None, Random, Wave, Pendulum, Breathe, Glissando, Aurora	Breathe
Rate	`motion_rate`	0.1 .. 4	1
Depth	`motion_depth`	0 .. 1	1
Landscape	`landscape`	Aurora, Shepard, Tides, Rain, Choir	Aurora
Dispersion	`dispersion`	-1.5 .. 1.5 s	0 s

FIELD

Control	Key	Range	Default
Field	`field_mode`	Off, Scale, Swarm, Scatter	Off
Pull	`field_strength`	0 .. 1	0.5
Radius	`field_radius`	5 .. 600 ct	60 ct
Spring	`field_spring`	0 .. 1	0.2
Wander	`field_rate`	0.005 .. 1	0.05
Attractors	`field_count`	1 .. 8	4

Filter and envelope

The filter is read as a frequency response at every partial: LP 6, LP 12, LP 24, HP 12, BP 12, Notch, Peak and Formant (whose cutoff picks the vowel). Env Amount moves the cutoff with the voice's envelope, in octaves; Key Track follows the note; Drift lets the cutoff wander on its own. MIDI controller 74 moves the cutoff.

The envelope is every voice's: Attack, Decay, Sustain, Release, in seconds to minutes.

FILTER

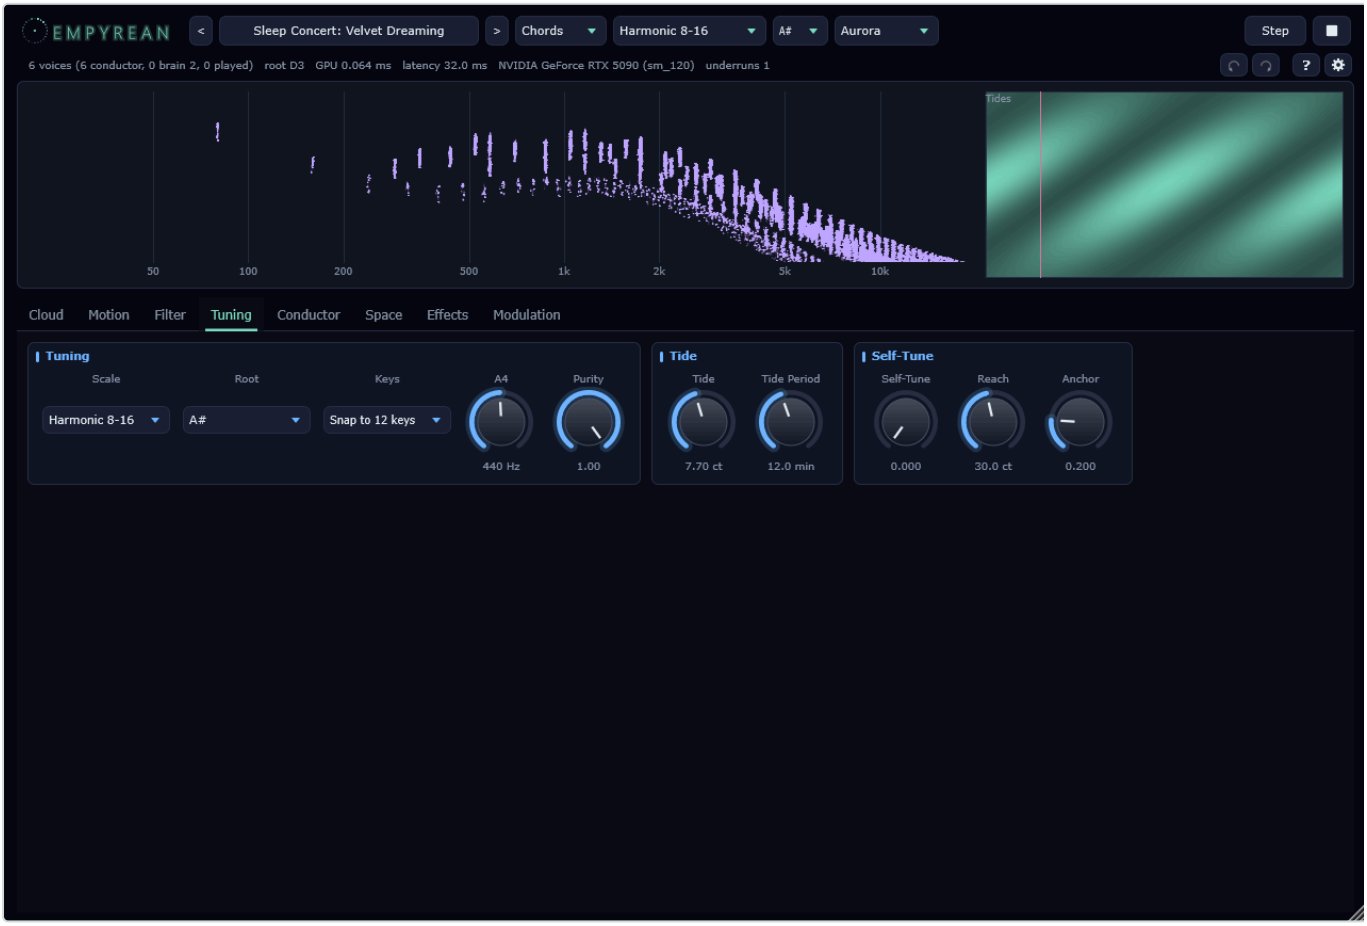

Control	Key	Range	Default
Model	`filter_model`	Off, LP 6, LP 12, LP 24, HP 12, BP 12, Notch, Peak, Formant	Off
Cutoff	`cutoff`	40 .. 18000 Hz	2500 Hz
Resonance	`resonance`	0 .. 1	0.15
Env Amount	`filter_env`	-4 .. 4 oct	0 oct
Key Track	`keytrack`	0 .. 1	0.5
Drift	`filter_drift`	0 .. 1	0.3

ENVELOPE

Control	Key	Range	Default
Attack	`attack`	0.01 .. 60 s	6 s
Decay	`decay`	0.01 .. 60 s	4 s
Sustain	`sustain`	0 .. 1	1

Release	`release`	0.05 .. 120 s	12 s

Tuning

Scale chooses the tuning: equal temperament, the just scales, the harmonic series, slendro, Bohlen-Pierce, or Timbre -- the scale the cloud's own spectrum asks for (Sethares). Root is its tonic; Keys maps the keyboard (snapped to twelve keys, or one key per degree). Purity blends equal temperament (0) with the scale (1). Tide leans the whole instrument by a few cents on a curve of minutes.

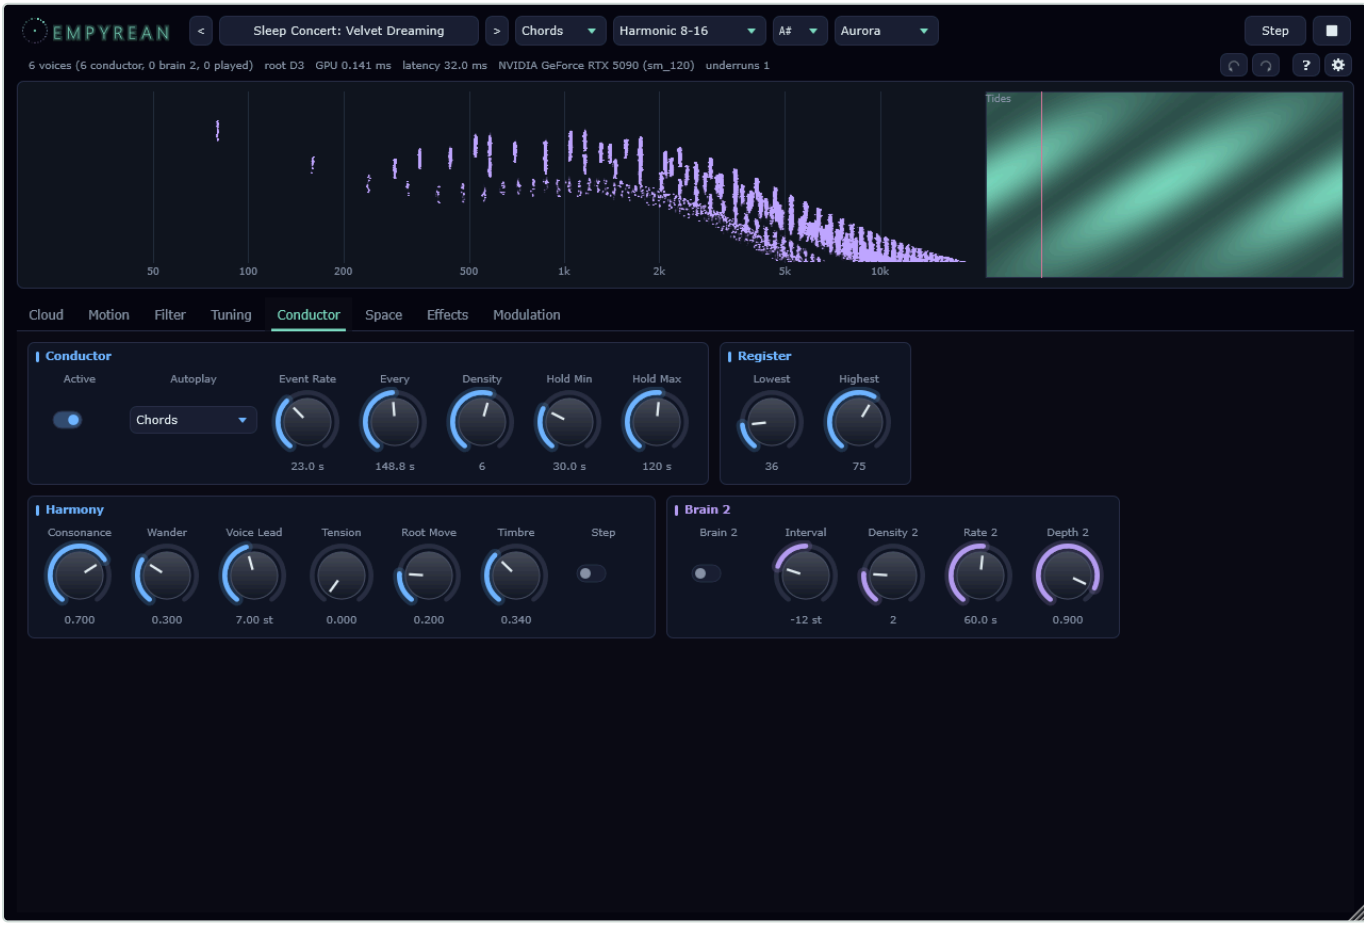

Self-Tune lets a chord tune itself. Where a harmonic of one voice nearly meets a harmonic of another (within Reach), the two voices pull together until they no longer beat: an equal-tempered major third settles to a pure one within seconds, and gives way again when the chord changes. Anchor draws every voice back towards its pitch in the scale.

TUNING

Control	Key	Range	Default
Scale	`scale`	12-TET, JI Major (Ptolemy), JI Minor, JI 7-limit, Pythagorean, JI Pentatonic, Harmonic 8-16, Subharmonic 16-8, Slendro (JI), Bohlen-Pierce (JI), Otonality 1-11, User (Scala), Timbre (Sethares)	JI 7-limit
Root	`root`	C, C#, D, D#, E, F, F#, G, G#, A, A#, B	D
Keys	`keymap`	Snap to 12 keys, Consecutive degrees	Snap to 12 keys
A4	`ref_pitch`	415 .. 466 Hz	440 Hz
Purity	`purity`	0 .. 1	1
Tide	`tide`	0 .. 30 ct	0 ct

Tide Period	`tide_period`	1 .. 60 min	12 min
Self-Tune	`tune_gravity`	0 .. 1	0
Reach	`tune_reach`	5 .. 60 ct	30 ct
Anchor	`tune_anchor`	0 .. 1	0.2

The conductor

Free lets notes come and go on their own timers. Chords (Autoplay) keeps the chord full and exchanges one voice at a time, every so many seconds (Every) or now (Step): the new note is the one that sits best against the voices that stay, within Voice Lead semitones. Tension allows notes that lean; Root Move lets the harmony travel. Timbre judges consonance from the cloud's own spectrum.

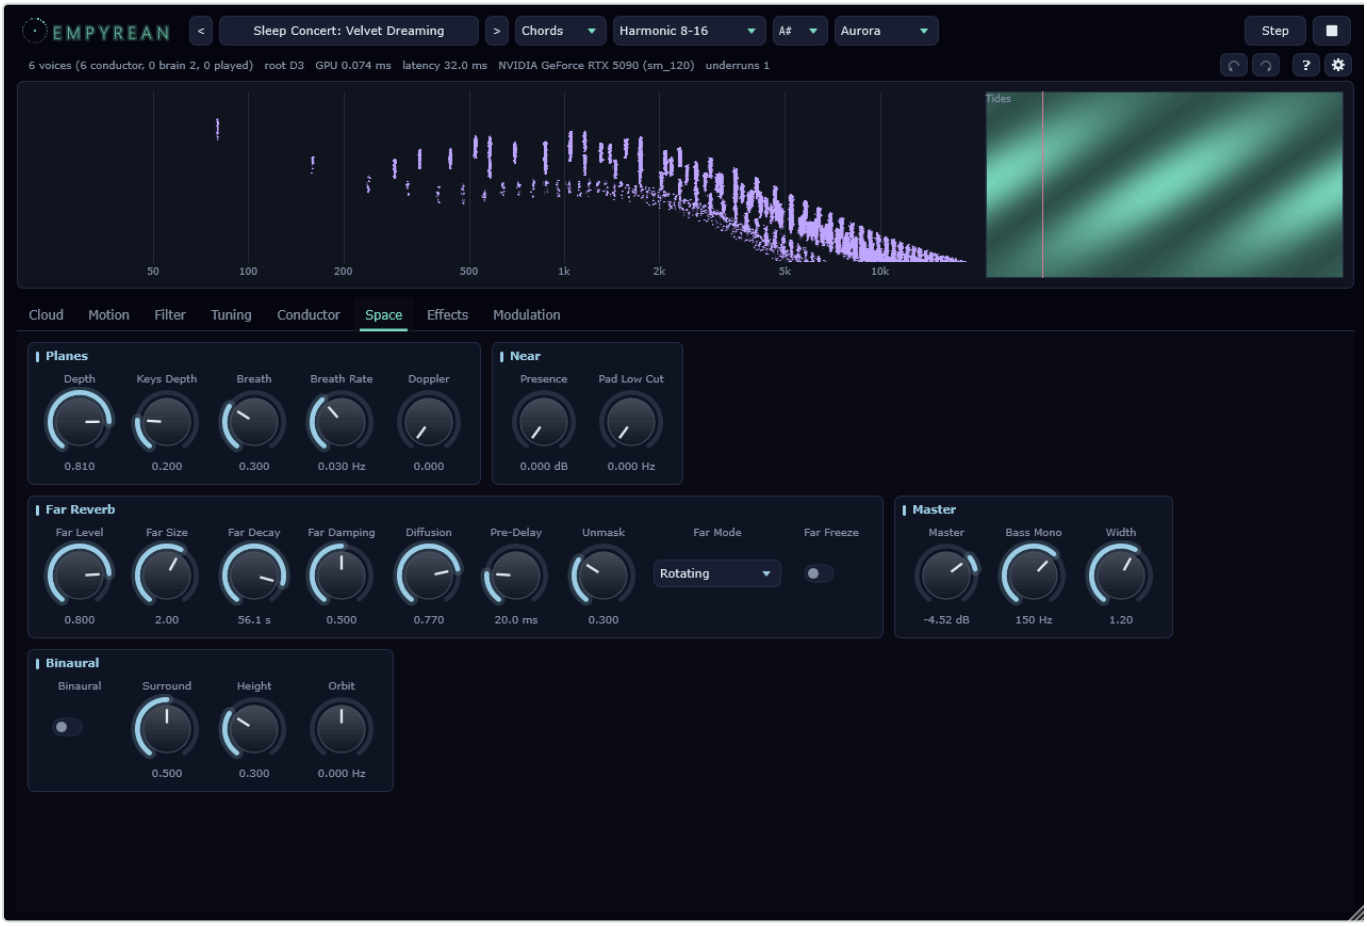

Brain 2 is a second conductor in the background: its root follows the first one's plus Interval, it plays slowly (Rate 2), few notes (Density 2), deep in the space (Depth 2).

CONDUCTOR

Control	Key	Range	Default
Active	`brain_on`	off / on	on
Autoplay	`auto_mode`	Free, Chords	Chords
Event Rate	`brain_rate`	2 .. 300 s	25 s
Every	`auto_rate`	2 .. 900 s	45 s
Density	`brain_density`	1 .. 10	5
Hold Min	`brain_hold_min`	5 .. 600 s	30 s
Hold Max	`brain_hold_max`	5 .. 600 s	120 s
Lowest	`brain_low`	24 .. 96	36
Highest	`brain_high`	24 .. 108	79
Consonance	`brain_consonance`	0 .. 1	0.7

Wander	`brain_wander`	0 .. 1	0.3
Voice Lead	`auto_lead`	1 .. 24 st	7 st
Tension	`auto_tension`	0 .. 1	0
Root Move	`auto_root_move`	0 .. 1	0.2
Timbre	`brain_timbre`	0 .. 1	0
Step	`auto_step`	off / on	off
Brain 2	`brain2_on`	off / on	off
Interval	`brain2_interval`	-24 .. 24 st	-12 st
Density 2	`brain2_density`	1 .. 6	2
Rate 2	`brain2_rate`	2 .. 300 s	60 s
Depth 2	`brain2_depth`	0 .. 1	0.9

Space

Every note stands on a plane between the ear (0) and the far background (1): the conductor puts some notes near and most deep (Depth), played notes stand at Keys Depth. A far note is quieter, darker and heard only through the far reverb. Breath lets every voice's plane wander; Doppler raises a voice that comes closer. Presence lifts the 2-5 kHz band on the near plane; Pad Low Cut leaves the bottom free.

The far reverb (Level, Size, Decay, Damping) is Noctuary's, with its Diffusion (the swell before the hall), Pre-Delay, Unmask (the hall steps aside, band by band, wherever the near plane sounds), its four networks (Far Mode: Colourless rings least, Rotating lets the tail drift) and Freeze.

Binaural (for headphones) places every partial of the near plane at a point of its own round the head: the head's shadow, the folds of the ear and the time the sound takes round the head, worked out for each partial at its own frequency. Surround spreads the places from the front half to all round, Height lifts and lowers them, Orbit turns the whole cloud round the listener. The far plane stays as it was, heard through the far reverb; the master's width and mono bass step aside while Binaural is on. Master: the level, the bass made mono below Bass Mono, and the width.

SPACE

Control	Key	Range	Default
Depth	`depth`	0 .. 1	0.6
Keys Depth	`keys_depth`	0 .. 1	0.2
Far Level	`far_level`	0 .. 1	0.8

Far Size	far_size	0.5 .. 3	2
Far Decay	far_decay	1 .. 90 s	25 s
Far Damping	far_damp	0 .. 1	0.5
Presence	presence	0 .. 6 dB	0 dB
Pad Low Cut	pad_low_cut	0 .. 300 Hz	0 Hz
Breath	breath	0 .. 1	0
Breath Rate	breath_rate	0.005 .. 0.2 Hz	0.03 Hz
Doppler	doppler	0 .. 1	0
Diffusion	far_diffuse	0 .. 1	0.5
Pre-Delay	far_predelay	0 .. 500 ms	20 ms
Unmask	far_unmask	0 .. 1	0.3
Far Mode	far_mode	Classic, Scattering, Colourless, Rotating	Colourless
Far Freeze	far_freeze	off / on	off

MASTER

Control	Key	Range	Default
Master	master_gain	-40 .. 12 dB	0 dB
Bass Mono	bass_mono	40 .. 300 Hz	150 Hz
Width	stereo_width	0 .. 2	1.2

BINAURAL

Control	Key	Range	Default
Binaural	binaural	off / on	off
Surround	binaural_span	0 .. 1	0.5
Height	binaural_height	0 .. 1	0.3
Orbit	binaural_orbit	-0.5 .. 0.5 Hz	0 Hz

Echoes, rooms and the modal hall

Echo is Noctuary's: two delays whose times glide and wander, a little different in each ear. Cross takes each side's feedback partly from the other, Damping darkens the loop, Absorb narrows it to a band as the feedback rises (so long echoes drown in fog instead of merely getting quieter), and Duck darkens it while the voices are loud, so a new note does not have to fight the last one's tail. To Far sends the echoes into the far plane, where they recede into the far reverb. Echo 2 runs after the first and hears its echoes: longer chains.

Room gives the near plane a place to stand: the early reflections of a room (Room Size, Absorb), arriving from where the voices stand, and a small reverb (Near Reverb, Near Decay, Near Damping).

The modal hall is a reverb made the way the instrument is made: sixty-five thousand resonances on the graphics card, each a sine that dies away, woken by everything the voices play. Decay is the time it takes to fall silent (60 dB) in the low range; Damping lets the upper octaves die sooner. Tuned puts that share of the resonances on the pitches of the scale, and Spread scatters them a few cents around their notes: with Tuned up, the hall rings in key, like the sympathetic strings of a viola d'amore, and retunes without a click when the scale or its root changes. Drift lets every resonance wander by a few cents, Width gives each its own place in each ear, Lowest keeps the bottom free. Breath lets every resonance's decay wander slowly, so the hall's colour moves while it rings. Paint lets the hall be heard through the landscape: its resonances light up where the landscape is bright, so the tail draws the aurora, the rain, the tides. Freeze holds the hall as it is, its input shut: a chord left hanging in the air.

The spectral echo takes the sound apart into five hundred bands and gives each a delay line of its own. Tilt brings the high bands back later than the low ones (or earlier), Scatter gives every band a time of its own, Feedback and Damping set how long and how dark the repeats are, To Far how much of them recedes. An attack comes back as a cascade, a chord as a spreading shimmer.

Memory keeps a ghost of every note let go. It rises over Bloom once the note has gone, fades over Memory Time, and while it fades it widens, drifts and darkens (Blur) and recedes into the far plane (Sink): the harmony of the last minutes stands faintly behind the present one.

ECHO

Control	Key	Range	Default
Echo	`delay_mix`	0 .. 1	0
Time L	`delay_time_l`	0.02 .. 4 s	0.75 s
Time R	`delay_time_r`	0.02 .. 4 s	1.13 s
Feedback	`delay_feedback`	0 .. 0.95	0.45
Cross	`delay_cross`	0 .. 1	0.35
Damping	`delay_damp`	0 .. 1	0.45
Absorb	`delay_absorb`	0 .. 1	0.3
Duck	`delay_duck`	0 .. 1	0.3
To Far	`delay_to_far`	0 .. 1	0.4
Echo 2	`delay2_mix`	0 .. 1	0
Time L 2	`delay2_time_l`	0.05 .. 4 s	2.4 s
Time R 2	`delay2_time_r`	0.05 .. 4 s	3.1 s
Feedback 2	`delay2_feedback`	0 .. 0.95	0.55
Damping 2	`delay2_damp`	0 .. 1	0.6
To Far 2	`delay2_to_far`	0 .. 1	0.6

ROOM

Control	Key	Range	Default
Early	`early_level`	0 .. 1	0.2
Room Size	`early_size`	2 .. 40 m	14 m
Absorb	`early_absorb`	0 .. 1	0.4
Near Reverb	`near_mix`	0 .. 1	0.1
Near Decay	`near_decay`	0.2 .. 8 s	1.8 s
Near Damping	`near_damp`	0 .. 1	0.5

MODAL

Control	Key	Range	Default
Modal Hall	`modal_level`	0 .. 1	0
Decay	`modal_decay`	0.5 .. 60 s	8 s
Damping	`modal_damp`	0 .. 1	0.35

Tuned	`modal_tune`	0 .. 1	0.5
Spread	`modal_spread`	0 .. 50 ct	6 ct
Drift	`modal_drift`	0 .. 30 ct	4 ct
Width	`modal_width`	0 .. 1	1
Lowest	`modal_low`	30 .. 400 Hz	80 Hz
Freeze	`modal_freeze`	off / on	off
Breath	`modal_breath`	0 .. 1	0
Paint	`modal_paint`	0 .. 1	0

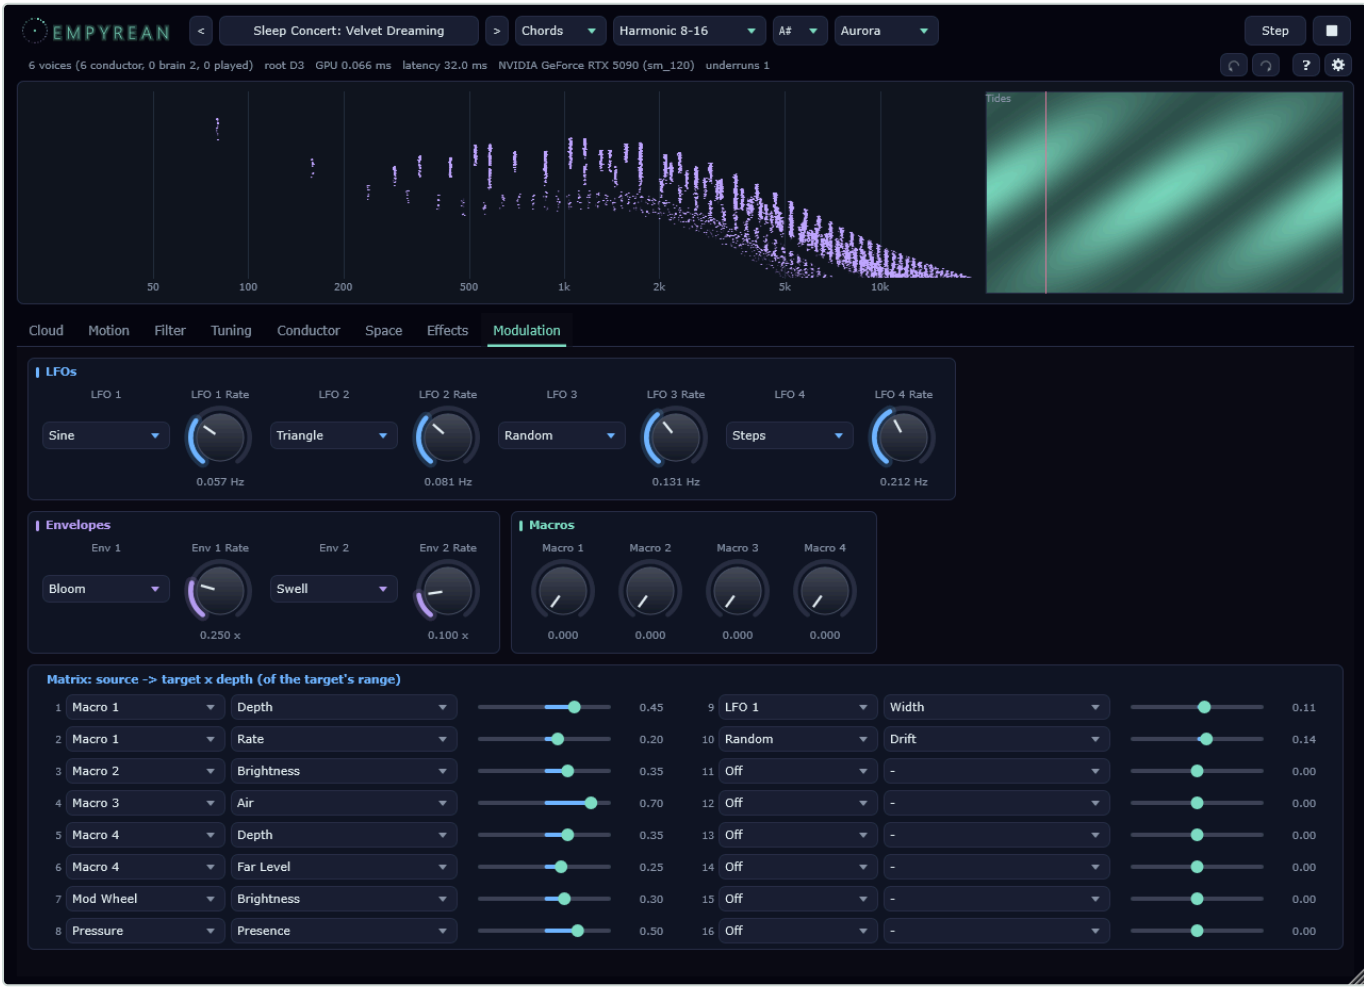

SPECTRAL ECHO

Control	Key	Range	Default
Spectral Echo	`spec_mix`	0 .. 1	0
Time	`spec_time`	0.05 .. 4 s	0.8 s
Tilt	`spec_tilt`	-1 .. 1	0.5
Scatter	`spec_scatter`	0 .. 1	0.3
Feedback	`spec_feedback`	0 .. 0.95	0.5
Damping	`spec_damp`	0 .. 1	0.4
To Far	`spec_to_far`	0 .. 1	0.4

MEMORY

Control	Key	Range	Default
Memory	`memory_level`	0 .. 1	0
Memory Time	`memory_time`	10 .. 300 s	60 s
Bloom	`memory_bloom`	0.2 .. 20 s	4 s
Blur	`memory_blur`	0 .. 1	0.5
Sink	`memory_sink`	0 .. 1	0.6

Modulation

Four LFOs, two envelopes and four macros move the instrument's knobs through a matrix of sixteen rows: a source, a target, a depth. The LFOs are slow by default (their rates step by the golden ratio, so they never line up) and have no hard edges: Square and Ramp glide through their jumps in a few percent of a cycle, Random is a drifting curve, Steps glides from one value to the next. The envelopes are shapes from the motions' bank, played from the start whenever a note arrives into silence; Rate sets how fast they run.

The macros are knobs without a place of their own: they mean what the matrix says. Every factory preset gives them the same meaning, so that a controller mapped to them plays every preset: Macro 1 the motion (Depth and Rate), Macro 2 the brightness or the filter, Macro 3 the air, Macro 4 the depth in the space. The mod wheel, channel pressure, the velocity of the last note and a slow random curve are sources too.

Depth is measured in the knob's own travel: 0.5 moves a knob by half its range up and down, whatever its unit. A knob that is modulated shows a ring around it where its value is now.

MODULATION

Control	Key	Range	Default
LFO 1	`lfo1_shape`	Sine, Triangle, Ramp Up, Ramp Down, Square, Random, Steps	Sine
LFO 1 Rate	`lfo1_rate`	0.001 .. 20 Hz	0.05 Hz
LFO 2	`lfo2_shape`	Sine, Triangle, Ramp Up, Ramp Down, Square, Random, Steps	Triangle
LFO 2 Rate	`lfo2_rate`	0.001 .. 20 Hz	0.0809 Hz

LFO 3	`lfo3_shape`	Sine, Triangle, Ramp Up, Ramp Down, Square, Random, Steps	Random
LFO 3 Rate	`lfo3_rate`	0.001 .. 20 Hz	0.1309 Hz
LFO 4	`lfo4_shape`	Sine, Triangle, Ramp Up, Ramp Down, Square, Random, Steps	Steps
LFO 4 Rate	`lfo4_rate`	0.001 .. 20 Hz	0.2118 Hz
Env 1	`env1_shape`	Swell, Pulse, Bloom, Flicker, Wobble, Rise In, Fall In, Saw Up	Bloom
Env 1 Rate	`env1_rate`	0.02 .. 8 x	0.25 x
Env 2	`env2_shape`	Swell, Pulse, Bloom, Flicker, Wobble, Rise In, Fall In, Saw Up	Swell
Env 2 Rate	`env2_rate`	0.02 .. 8 x	0.1 x
Macro 1	`macro1`	0 .. 1	0
Macro 2	`macro2`	0 .. 1	0
Macro 3	`macro3`	0 .. 1	0
Macro 4	`macro4`	0 .. 1	0

Presets

The bank holds 1024 presets in sixteen groups of 64: Sleep Concert, Choirs, Glass, Bells, Strings, Organs, Air & Noise, Deep Space, Glissandi, Pendulums, Waves, Shepard & Tides, Shimmer, Dark Drones, Microtonal and Keys. The arrows in the header step through them; a click on the name opens the list by group. Every preset was measured by its loudest second and brought to the same level, so stepping through them does not jump.

MIDI program change chooses a preset within the group that bank select (controller 0) names. A preset sets every knob and the matrix; your MIDI-learn bindings stay.

Family jam and headset

The instruments of the family (Noctuary, Ephemeris, Phosphene, Totality, Parhelion and this one) can play together on one computer or a local network: Settings > Family jam. A follower keeps its conductor's root on the leader's (the nearest note of that pitch class, in its own tuning) and opens or closes with the energy of the leader's section; a leader tells the others its root and scale.

The Meta Quest app has no graphics card to compute twenty thousand partials per voice, so the instrument stays on this computer and the headset sends only its hands (bridge mode): Settings > Headset. The left hand's height is the brightness (Macro 2), the right hand's the motion (Macro 1); the pinches play and stop the conductor, step it, bring Brain 2 in and out, and both hands pinched choose the next preset.

Playing

The keyboard plays over the conductor. The hold pedal (controller 64) keeps notes sounding until it comes up. Right-click any control for MIDI learn (move a controller to bind it), to forget a binding or to return to the default.

Everything you hear is delayed by the same few milliseconds (the engine renders ahead of the audio so the graphics card can never make it stutter); a host compensates for it.

MIDI

Message	What it does
Notes	play over the conductor (velocity: the note's level, and a source of the matrix)
Controller 0, then program change	a preset: the bank names the group (0 .. 15), the program the preset in it (0 .. 63)
Controller 1 (mod wheel)	a source of the matrix; the factory presets open the filter or the brightness with it
Controller 64 (hold pedal)	keeps notes sounding until it comes up
Controller 74	the filter's cutoff
Channel or key pressure	a source of the matrix; the factory presets lift the presence with it
All notes off, all sound off	every voice is released
Any other controller	MIDI learn: right-click a control, move the controller

What it needs

Graphics card	NVIDIA GeForce RTX 20 or newer (Turing and later) with a current driver; the instrument computes every partial there and is silent without one, saying so in the status line
System	Windows 10 or 11, 64-bit, a processor with AVX2
Formats	standalone application and VST3 plug-in; the offline renderer empy_render for the command line
Latency	two audio blocks and ten milliseconds, reported to the host, which compensates for it

License

Empyrean is free software under the GNU Affero General Public License, version 3 (LICENSE.txt beside the program). It is built with JUCE and NVIDIA's CUDA; the CUDA runtime is linked into the program under NVIDIA's license for it.
